

NOTICE

Water Level drawdown start - October 13, 2026

Renfrew Power Generation (RPG), and the Golden Lake Property Owners Association (GLPOA) would like to give notice to Riparian's and all other water users, especially those with watercrafts, that the gradual lowering of the water level will be starting on **October 13th, 2026**.

Prior to making recreational plans, lake users should familiarize themselves with the water level regime to avoid areas that may become unsafe for boating, ice fishing or snowmobiling as the water level gradually declines over the coming fall/winter. Boat removal could be challenging if left too late.

The drawdown is necessary to best protect from the high water associated with the Spring Freshet.
