

NOTICE – 2026/2027

NOTICE: All Riparian's and Users of Lake Clear

Renfrew Power Generation (RPG), and the Lake Clear Property Owners Association (LCPOA) would like to give notice to Riparian's and all other water users, especially those with watercrafts, that water levels will begin to be *gradually* lowered on Lake Clear beginning October 1, 2026. The drawdown will be carried out the same as years past to lower the water level in anticipation of the high water that comes during Spring Freshet. Prior to making recreational plans, lake users should familiarize themselves with the water level regime to avoid areas that may become unsafe for boating, ice fishing or snowmobiling as water levels gradually decline. Boat removal could be challenging if left too late.
