

NOTICE

Water Level drawdown start - September 7th, 2026

Renfrew Power Generation (RPG), and the Round Lake Property Owners Association (RLPOA) would like to give notice to all Riparian's and all other water users, especially those with watercrafts, that water level will begin to be gradually lowered on Round Lake **beginning September 7, 2026.** Prior to making recreational plans, lake users should familiarize themselves with the water level regime to avoid areas that may become unsafe for boating, ice fishing or snowmobiling as the water level gradually declines over the coming fall and winter. Boat removal could be challenging if left too late. The water level will be gradually lowered in a manner to best protect the turtles and fish.

The drawdown is necessary to best protect property from the high water that comes during the Spring Freshet.
