NOTICE: All Riparian's and Users of Round Lake

Renfrew Power Generation (RPG), Killaloe, Hagarty Richards (KHR), and the Round Lake Property Owners Association (RLPOA) would like to give notice to Riparian's and all other water users, especially those with watercrafts, that water levels will begin to be lowered on Round Lake beginning September 6, 2022, as outlined in the amendment to the Bonnechere River Water Management Plan (BRWMP). The timing is important to allow the water levels to be lowered in a way to protect the lake trout spawn and overwintering turtles while ultimately lessening severe impacts from high water during the Spring Freshet. Prior to making recreational plans, lake users should familiarize themselves with the water level regime to avoid areas that may become unsafe for boating, ice fishing or snowmobiling. Boat removal could be challenging if left too late.

Details of the BRWMP amendment and water level charts are available at www.renfrewpg.ca/water-levels-flow-history/ or www.killaloe-hagarty-richards.ca.
