

NOTICE – 2024/2025

NOTICE: All Riparian's and Users of Lake Clear

Renfrew Power Generation (RPG) would like to give notice to Riparian's and all other water users, especially those with watercrafts, that RPG will be removing the stoplogs from the Lake Clear dam beginning October 1, 2024. The water level is expected to decline like years past and is necessary to best prepare for the anticipated high water that comes during Spring Freshet. Prior to making recreational plans, lake users should familiarize themselves with the water level regime to avoid areas that may become unsafe for boating, ice fishing or snowmobiling as water levels gradually decline. Boat removal could be challenging if left too late.
